

Figure 2: Outcome measures with primary outcomes identified where these are the basis for power calculation

	Astin 2003	Brown 2013	Esmer 2010	Morone 2009	Morone 2008	Plews-Ogan 2005	Pradhan 2007	Schmidt 2011	Sephton & Weissbecker 2007, 2002	Wong 2011	Zautra 2008
ECONOMIC OUTCOMES											
Medication use											
Complementary/alternative therapy use											
Doctors' appointments											
Inpatient care											
Medical procedures											
Sickness absence											
CLINICAL OUTCOMES											
Pain intensity										P	
Depressive symptoms							P		P		
Sleep quality											
Pain perception											
Pain-related distress											
Pain unpleasantness											
Myalgic score											
RA disease status											
Blood tests											
Somatic symptoms											
Anxiety											
Psychological distress											
Mood disturbance											
Physiological data											
EEG data											
Adverse events											
HUMANISTIC OUTCOMES											
Quality of life (general)								P			
Quality of life (disorder specific)											
Physical functioning	P										
Pain coping											
Perceived pain control											
Pain catastrophising											
Pain self-management											
Pain self-efficacy											
Pain acceptance											
Mindfulness											
Well-being											
Sense of coherence											
Patient-centred outcomes											

= Economic outcome
 = Clinical Outcome
 = Humanistic outcome
 P = Primary outcome (where specified)
